

22nd-24th October 2007, Thessaloniki, Greece.

SPI-Water is an EC research project (FP6) in the context of Specific Support to Policies, aiming to enhance the interfacing between science and policy with respect to the Water Framework Directive Implementation. The final goal is to accomplish a tool where all WFD related information and experience needed by water managers, decision-makers, their supporting technical staff and stakeholders will be easily accessible. This workshop, coordinated by INWEB, will focus on the Pinios River Basin, Greece.
